EDUCATION

Arizona State University

Bachelor's in Computer Science (Cybersecurity) GPA: 3.91/4.0

Coursework: Computer Systems Security, Computer & Network Forensics, Information Assurance, Operating Systems, DBMS, Algorithms, Data Structures, Software Engineering, Theoretical Computer Science, Assembly Language, Digital Design

Tempe, AZ

Aug 2023 - May 2027

EXPERIENCE

IT Support Assistant

Nov 2025 – Present

Arizona State University

Tempe, AZ

- Performed **incident response and troubleshooting** for critical software, system, and endpoint issues, resolving **95% of support tickets within SLA targets** while minimizing user downtime, and maintaining campus operations.
- Streamlined incident management, **improving ticket tracking efficiency by 30%** through accurate documentation, status monitoring, technical updates, troubleshooting, escalation, and resolution procedures across faculty/staff support requests.
- Strengthened **operational security and system reliability** by installing, and maintaining enterprise software across faculty/staff endpoints, contributing to a **20% reduction in software-related errors**, recurring incidents, and disruptions.

Security Engineering Intern

May 2026 – Aug 2026

ACL Digital (Alten Group)

San Francisco, CA

- Led security development for a 6 person intern team building Forge, a finance automation platform, implementing **Supabase authentication, Fastify middleware, and role-based access controls** protecting application routes and data.
- Prevented unauthorized cross-entity access across five business entities by designing **entity-scoped authorization with TypeScript, PostgreSQL, and Supabase Row-Level Security**, restricting sensitive records to authorized users only.
- Strengthened application security by implementing **9 defense-in-depth controls**, including **JWT validation, RBAC, rate limiting, entity filtering, audit logging, CORS restriction and sensitive-data masking platform-wide**.

Software Engineering Intern

June 2024 – Aug 2024

TATA Advanced Systems Ltd.

Mumbai, India

- Designed and developed a **Java-based automated file synchronization application** to improve data consistency and reliability, achieving a **20% increase in reliability** by resolving inconsistent, incomplete, and conflicting file updates.
- Improved system efficiency and transactional performance, resulting in **15% reduction in total file synchronization time**, by optimizing and fully streamlining the application's core file transfer processes.
- Optimized complex file transfer and synchronization processes to eliminate persistent data duplication issues, achieving a **30% reduction in storage overhead** while improving file accuracy, reliability, integrity, and efficiency across environments.

PROJECTS

KAIRO – Automated AI Red-Teaming Platform | Python, FastAPI, LangChain, OpenAI API, Gemini

- Led **threat analysis** by developing an **automated AI red-teaming platform** that **detected over 90% of known agent vulnerabilities** through modular attack orchestration using Python, FastAPI, and LangChain.
- Enhanced **vulnerability detection accuracy by reducing false positives by 25%** using aggregation logic and applying multi-judge consensus scoring with Gemini/Anthropic models through algorithms and data filtering.
- Streamlined incident response** through automated vulnerability reporting workflows, **cutting incident response time by 35%**, and providing prioritized findings for risk management and decision-making.

Virtualized Network Security Lab | Kali Linux, Metasploit, Splunk, VMware

- Conducted Risk Analysis** by architected, and **deploying a multi-VM virtual network** using VMware, integrating a Kali Linux machine for **penetesting against vulnerable targets like OWASP Juice Shop**.
- Performed vulnerability scanning and threat simulation using **Nmap and Metasploit to conduct reconnaissance**, and successfully exploit a remote code execution vulnerability on a target server environment.
- Created comprehensive security documentation—from recon and initial access to privilege escalation—showcasing a strong, hands-on understanding of practical ethical hacking tools, techniques, and real-world methodologies.

Discussion Board | JavaFX, H2 Database, GitHub, Eclipse

- Ensured robust and secure application access by **validating user roles during login**, dynamically restricting sensitive UI components, and safeguarding backend functions to maintain proper authorization controls.
- Implemented role-based access control** in the backend to differentiate between Admin, Staff, and Students.

UniFi | Next.js, Tailwind CSS, Python, PostgreSQL, Vercel

- Developed a **personal finance web application** enabling users to track income, expenses, and shared goals through interactive dashboards, insightful analytics, and user-friendly financial management tools.
- Engineered data structures to efficiently **manage solo, couple, and family financial goals**, enabling customizable contribution ratios to support diverse group financial planning and collaborative goal achievement.

TECHNICAL SKILLS

Cybersecurity Tools: VMware, Nmap, Metasploit, Kali Linux, Splunk(Basic), ServiceNow, LangChain, GeminiAPI, Incident Response, Vulnerability Management, Threat Detection

Languages & Tools: Bash, PowerShell, Java, Python, C/C++, SQL, MATLAB, GitHub, VS Code, Cursor, IntelliJ

Design and Modeling Tools: Microsoft Office Suite, Canva, Figma, Google Suite, Adobe Acrobat Pro DC

CERTIFICATIONS

Certifications

- Google Cybersecurity Certificate (Google, Coursera)
- Mastercard - Cybersecurity Job Simulation (Mastercard, Forage)
- TATA - Cybersecurity IAM Developer Job Simulation (Tata Consultancy Services(TCS), Forage)
